February 4, 2009

Hello and welcome to the 2009 Annual Southeast Region Utility Conference. This conference serves as a forum to share information regarding our proposed highway improvement projects and the relocation of affected utility facilities. We hope that you find the conference both informative and useful.

The counties within the Southeast Region are Kenosha, Milwaukee, Ozaukee, Racine, Walworth, Washington, and Waukesha.

As part of our commitment to our customers, we have developed this handbook titled *2009 Southeast Region Utility Conference Handbook*. It contains detailed project related information as well as individual county maps showing the location of the region's 6-year highway improvement program (state highway and local road projects). The information in the handbook was printed as of February 4, 2009 and is subject to change. We will keep you informed of changes to the program during various stages of the project and through future Utility Conferences.

We ask that each of you provide feedback about today's conference and handbook. Please take a few moments to complete the questionnaire(s) that are part of your packet of handouts.

We look forward to working with you on future projects and appreciate all your efforts to assist us in creating improved transportation routes.

Sincerely,

Donald Berghammer,

Donald Berghammer, P.E.
WisDOT-SER Utility, Railroads & Environmental Services Supervisor

Wisconsin Department of Transportation
 New regional organization
 Effective May 29, 2005 (updated January 24, 2007)

DIVISION OF TRANSPORTATION SYSTEM DEVELOPMENT (DTSD)

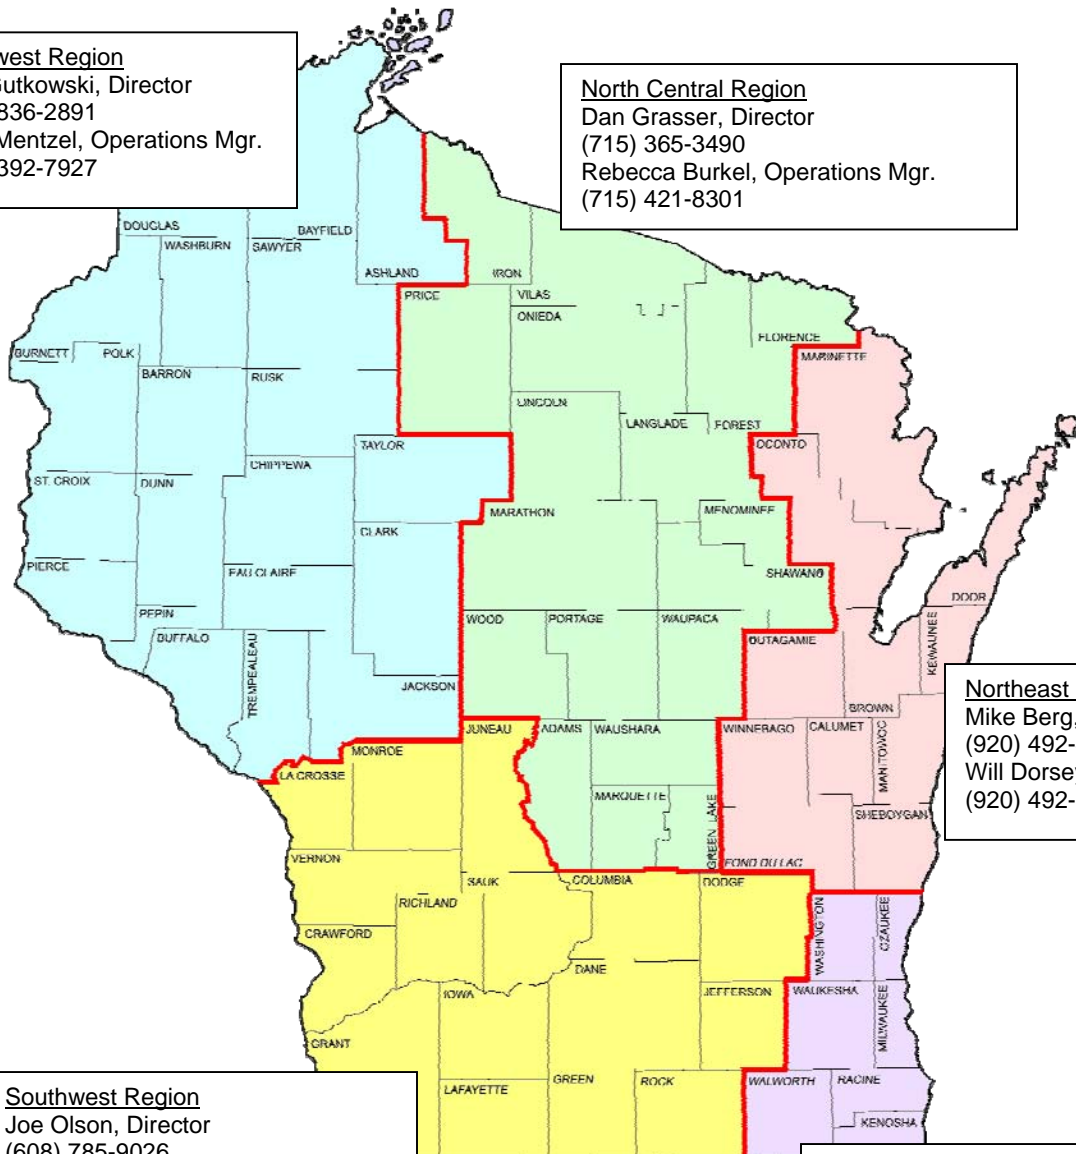

Kevin Chesnik, Administrator
 Rory Rhinesmith, Statewide Bureaus Operations Director
 Paul Trombino, Regional Operations Director

Statewide bureau managers (Madison)

- Bureau of Equity & Environmental Services – Eugene Johnson, Director
- Bureau of Highway Operations – David Vieth, Director
- Bureau of Project Development – Don Miller, Director
- Bureau of Structures – Beth Cannestra, Director
- Bureau of Technical Services – Dan McGuire, Director

Northwest Region
 Don Gutkowski, Director
 (715) 836-2891
 Jerry Mentzel, Operations Mgr.
 (715) 392-7927

North Central Region
 Dan Grasser, Director
 (715) 365-3490
 Rebecca Burkel, Operations Mgr.
 (715) 421-8301

Northeast Region
 Mike Berg, Director
 (920) 492-4118
 Will Dorsey, Operations Mgr.
 (920) 492-5684

Southwest Region
 Joe Olson, Director
 (608) 785-9026
 Rose Phetteplace, Operations Mgr.
 (608) 246-3801

Southeast Region
 Dewayne Johnson, Director
 (262) 548-5682
 Reggie Newson, Operations Mgr.
 (262) 548-5884

Proposed Highway Improvement Program Definitions

Resurfacing

Resurfacing means placing a new surface on an existing roadway to provide a better all weather surface, a better riding surface, and to extend or renew the pavement life. It includes pavement widening and shoulder paving (without changing the subgrade shoulder points). Generally, it involves no improvement in capacity or geometrics. Resurfacing may include some elimination or shielding of roadside obstacles, culvert replacements, signals, marking, signing and intersection improvements. Usually, no additional right-of-way is required; except possible minor acquisition for drainage and intersection improvements.

Additional Criteria

- Overlay must be placed directly on top of existing pavement (no intervening base course)
- May include spot replacement of curb and gutter in urban areas

Pavement Replacement

Pavement Replacement means structural improvement to the pavement structure or removal of the total thickness of all paving layers from an existing roadway and providing a new paved surface without changing the subgrade. It may include restoration of the base aggregate by adding more material before repaving, or adding base aggregate open-graded with drainage system. It generally involves no improvement in capacity or geometrics and no increase in roadbed width. Pavement replacement may include some elimination or shielding of roadside obstacles, culvert replacement, signals, pavement marking, signing and intersection improvements. Additional right-of-way is typically not required.

Additional Criteria

- “Paving layers” as used above means existing asphalt and concrete
- No change to subgrade means location of shoulder points is not changed
- May include curb and gutter replacement to same line and grade
- Does not include storm sewer construction
- May include transfer of width between pavement and shoulders
- May include shoulder paving

Reconditioning

Reconditioning means work in addition to resurfacing or pavement replacement. Reconditioning includes improvement of an isolated grade, curve, intersection or sight distance problem to improve safety, or changing the subgrade to widen shoulders or to correct a structural problem. Reconditioning projects may require additional right-of-way.

Additional Criteria

- Does not include, increasing the number of driving lanes
- May include replacing and/or expanding existing storm sewer systems
- May include continuous shoulder, pavement or subgrade widening
- Does not include adding continuous lanes
- May include reconstruction not to exceed 50% of the length of the project
- May include replacement of curb and gutter in urban areas with up to 50% of new curb & gutter on new horizontal or vertical alignment.

Reconstruction

Reconstruction means total rebuilding of both the pavement and subgrade of an existing highway to improve maintainability, safety, geometrics and traffic service. It is accomplished basically on existing location, and major elements may include flattening of hills and grades, improvement of curves, widening of the roadbed, and elimination or shielding of roadside obstacles. It includes minor widening of urban streets to widen lanes or to add parking, bicycle accommodations or auxiliary lanes. Removing parking together with pavement replacement is in this category, because the traffic carrying capacity of the roadway is increased without actually constructing new through travel lanes. Normally, this type of reconstruction will require some additional right-of-way.

Additional Criteria

- Work that either changes the location of the existing subgrade shoulder points or removes all of the existing pavement and base course for at least 50% of the length of the project.

Expansion

Expansion includes the same types of work associated with reconstruction, but also involves the construction of additional through travel lanes. In some cases, expansion may include construction of an entirely new street or highway on new alignment. Substantial land acquisitions may occur with these types of projects. Major projects are excluded from this definition. [EA]

Additional Criteria

- Same as Reconstruction
- Additional travel lanes may be either on existing or new location · May or may not include rebuilding the existing roadway.
- Relocation, as used below, means changing the horizontal alignment sufficiently so that the old and new right-of-way are no longer contiguous.

Bridge Rehabilitation

Bridge Rehabilitation means the repair, restoration or replacement of the components of the existing structure, including asphaltic surfacing or concrete overlays, as well as work to correct safety defects. Additional right-of-way will typically not be required, except minimal acquisitions may be necessary to accommodate ancillary improvements for drainage or for the construction of an abutment or pier.

Additional Criteria

- Includes widening of superstructure and substructure components
- Includes replacement of any superstructure component
- May include replacement of portions of abutments or piers

Bridge Replacement

Bridge Replacement means the building of a new bridge at the location of the existing structure or at a new location usually contiguous to the existing structure. A minor acquisition of additional right-of-way may be required.

Additional Criteria

- Includes replacement bridges with wider lanes and shoulders or additional lanes
- Includes eliminating grade separations and replacing with at-grade crossings
- Includes box culverts or a series of pipes wide enough to be classified as a bridge
- A bridge of any length or type may be replaced by any other

Map & Report Key

The following section includes maps for state highway and local road projects.

Each map contains as many as 20 projects per page with only one report for all the projects in that county.

The corresponding report lists projects by Construction Year and then by Let Date. Projects are further broken down by Design ID and then Construction ID (if more than one exists per Design ID).

Field definitions:

DESIGN ID	The number assigned to the design phase of the project
TITLE	Description information generally referring to map identifiable locations in cardinal direction (i.e., from South to North and from East to West)
PROJECT MANAGER	A staff member from the Project Development Section who oversees the designer of the project
CONST ID	The number assigned to the construction phase of the project
HIGHWAY	The STH or USH of the project
LIMITS	A description that further defines where the project is located
PROJECT NOTES	A field that provides more information about the project
LET	The date the project is let for bids
LENGTH	The length (in miles) of the project
TYPE OF WORK	Definition of highway improvement projects
